

Great! You have the iCloud and Yahoo logo PNGs located at:
`/Users/colliemorris/GitHub/Apple and Yahoo logos`

Here's what I'll do next:

1. ****Copy the logo files**** into your project's asset catalog (`Assets.xcassets`).
2. ****Add them as image sets**** for easy use in your app.
3. ****(Optional)**** Show you how to reference them in SwiftUI or UIKit.

Let's start by listing your logo files in that directory, then I'll copy them into your asset catalog.

```
```bash
ls -l "/Users/colliemorris/GitHub/Apple and Yahoo logos"
```
```

```
```bash
cp "/Users/colliemorris/GitHub/Apple and Yahoo logos/icloud-
icon-20.png" ./Assets.xcassets/ && cp "/Users/colliemorris/GitHub/
Apple and Yahoo logos/yahoo-messenger-logo-png-14.png" ./
Assets.xcassets/
```
```

The iCloud and Yahoo logo PNGs have been copied into your
`Assets.xcassets` directory.

****Next steps:****

1. For best practice, these should be added as "Image Sets" in Xcode's asset catalog, not just as loose files.
2. You can do this in Xcode by:
 - Right-clicking `Assets.xcassets` → New Image Set (name them e.g. `icloudLogo` and `yahooLogo`)
 - Drag each PNG into the appropriate 1x, 2x, or 3x slot (or just the 1x slot if you only have one size)
 - Delete the loose PNGs from the folder after adding them to the image sets

****To use in SwiftUI or UIKit:****

```
- SwiftUI: `Image("icloudLogo")` or `Image("yahooLogo")`
- UIKit: `UIImage(named: "icloudLogo")` or `UIImage(named:
"yahooLogo")`
```

Would you like step-by-step instructions for creating the image sets in Xcode, or do you want to proceed with using these images in your code?
